INFORMED CONSENT

Slak Chiropractic Group

Patient Name Printed: **X** _____

File #: _____

Chiropractic is the science of locating, and removing interference with the transmission or expression of nerve force in the human body, by the correction of misalignments or subluxations of the bony articulations and adjacent structures more especially those of the vertebra column and pelvis, for the purpose of restoring and maintaining health. Chiropractic recognizes that essentially only the body heals and, therefore, holds forth no cure for disease and does not guarantee any specific result. The primary chiropractic examination finding is the Vertebral Subluxation and the primary chiropractic procedure is the chiropractic adjustment, performed manually and/or with a manual device.

The material risks inherent in the chiropractic adjustment and examination: There are potential complications with any health care procedure. The most common side effect is stiffness and soreness and moving of symptoms during the first few weeks of care. Bruising can occur. Rare complications include fractures, disc injuries, dislocations, paralysis, strains and sprains. Some techniques used to manipulate the cervical spine (neck region) have been implicated in injury to the arteries in the neck leading to, or contributing to, serious complications that includes stroke. One prominent authority states that there is, at most, a one-in-a-million chance of such an outcome.

Ancillary procedures and additional risks: Ancillary procedures sometimes used include light, vibration, massage, and therapeutic exercise. Vibration, massage, and exercise have risks similar to Chiropractic Adjustments; and vigorous exercise may pose a significant health risk to those with advanced cardiovascular disease.

Availability and nature of treatment options: Other treatment options include self-administered over-the-counter analgesics, rest, prescription drugs, hospitalization, surgery and rehabilitation. The material risks inherent in such options and the probability of such risks occurring are significant. Chiropractors may provide general information, but they do not provide medical advice. We strongly suggest that you consult a knowledgeable physician when making a decision to take or discontinue medications.

The risks and dangers attendant to remaining untreated: Remaining untreated may promote the formation of adhesions and reduction of mobility. A pain reaction may result that further reduces mobility. Over time this process may complicate treatment, making it more difficult and less effective, the longer it is postponed. The probability that non-treatment will later complicate rehabilitation is relatively high.

Payment for services: Co-pays, deductibles and cash balances are due before service is rendered. This is to keep you informed of charges before they are incurred and to provide faster service. Any over-payment is refunded.

X-RAYS

X _____ (patient initials) Recommended x-rays may be taken at any facility of your choosing.

- X-ray films are kept as part of your permanent medical record. Copies are available in digital format. Please allow 5-10 business days after written request.

Flare-ups and injuries: It is your responsibility to tell the treating chiropractor if you've had a flare-up or new injury, before he/she starts treating you.

CONSENT

I have read or have had read to me the above explanation of the chiropractic examination, adjustment and related treatment. I have discussed any questions I have with the attending chiropractor and have had my questions answered to my satisfaction. By signing below I state that I have weighed the risks and benefits of treatment and have decided that it is in my best interest to undergo the treatment recommended and give my consent to the aforementioned examination and treatment.

AUTHORIZATION: The process of determining suitability for Chiropractic Services involves answering fully and truthfully all questions presented to either written or spoken regarding your past and present health status. If warranted, a physical examination will be performed that can include but is not limited to vitals measurement, systems evaluation, orthopedic tests, and maneuvers (tests that move and stress parts of the body), neurological test (tests using sharp or dull instruments, smells, or sounds, gently tapping) as well as physical touching. These tests and maneuvers will help the Chiropractor determine what may be causing your complaints. Occasionally some temporary soreness and/or stiffness may occur due to the examination, less frequently aggravation of presenting symptoms or initiation of new symptoms. By signing below, you have authorized the performance of a consultation and examination.

ACKNOWLEDGEMENT: We are very concerned with protecting your personnel health information. There may be times our office may need to contact you regarding office matters. By signing below, you have authorized this office to contact you for office related matters and thank you notices for referrals using your first name in the following manner: phone-work-home or mobile, e-mail and regular mail to include sealed envelopes and postcards. Messages may be left on an answering device/voicemail, or with the person answering your phone-home-work mobile. Also, in accordance with the Health Insurance Portability and Accountability act of 1996 (HIPAA), updated September 23, 2013, this office is obliging to supply you with a copy of the office privacy policies and procedures upon request. This document outlines the use and limitations of the disclosure of your personal health information and your rights as a patient.
